Mean 10.607; Variance 5.121; scale 2.071

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

	chain antibodies specific for erbB-2 protein, gp
	ο.
	cells expressing this protein
	The present cDNA sequence codes for a claimed single-chain antibody,
	designated e23(Fv), which binds to erbB-2. Monoclonal antibody e23
	generated by immunising mice
	10
	by standard techniques. Messenger RNA coding for the anti-erbB-2
	monoclonal antibody was isolated and converted to cDNA. Regions
	coding for the heavy- and light- chain variable regions were then
	amplified by PCR and joined via a sequence encoding a peptide
	linker. The resulting single-chain antibody is useful for in vitro

Abs no. 21 and 23 are directed against the extracellular domain of gp185 erbB-2. Nude mice manipulated to produce rapidly growing tumours were used in a trial of the efficacy of the Abs. I animals given a combination of the 2 Abs, tumours completely regressed after 11 days.

A nucleic acid comprises a first sequence encoding a signal peptide (R94019) linked to a second sequence (T17728) encoding a single chain Fv fragment (R94020) that binds a human erbB2 oncoprotein. The anti-erbB2 sFv portion is obtained by PCR using e33sCFv plasmid as template. The signal peptide directs the scFv to the endoplasmic reticulum. The nucleic acid is incorporated into a plasmid or viral vector to facilitate expression of the scFv antibody homologue within e.g. an epithelial carcinoma cell. Intracellular expression of the homologue inhibits surface expression of erbB2 and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Curiel DT, Deshane J; WPI; 96-171307/17.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Š
                                                                                                                                                                                             Fig. 1. Single chain antibodies specific for erbB-2 protein, gp185 - with plabels or cytotoxin, useful for detection and treatment of tumour cells expressing this protein

Example 9; Columns 27-30; 28pp; English.

The present cDNA sequence codes for a claimed single-chain antibody, which binds to erbB-2. Monoclonal antibody e21

Catesignated e21(Fv), which binds to erbB-2. Monoclonal antibody e21

Catesignated by immunising mice with NyerbB-2 cells overexpressing the gp185 protein, removing spleen cells and producing hybridomas by standard techniques. Messenger RNA coding for the anti-crbB-2 coding for the heavy- and light-chain coding for the new of a sequence encoding a peptide linker. The resulting single-chain antibody is useful for in vitro diagnosis of tumour cells which overexpress the erbB-2 gp185 cmarker, e.g. breast, ovarian and non-small cell lung carcinomas, and, when coupled to a cytotoxic agent, to treat such tumours.

Example; Fig 8; 37pp; English.
The source of human erbB-2 protein for the prodn. of antibodies 2 and 21 (055180/R45442; 055181/R45443) is a NIH/3T3 cell engineered to express the human erbB-2 protein on its surface (NerbB-2). Abs no. 21 and 23 are directed against the extracellulated domain of gp185 erbB-2. Nude mice manipulated to produce rapidally growing tumours were used in a trial of the efficacy of the Abs animals given a combination of the 2 Abs, tumours completely regreesed after 11 days.

FV(GP-4) immunosuppressive.
MAD; monoclonal antibody; hybri
FV; antibody variable region; G
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    thus of blocking the II-2 response, is produced by mouse line GP-2 (FERM BP-4641). DNA encoding the variable regiths MAb was expressed in E. coli, yielding Fv(GP-2) with immumosuppressive activity.

        3H1 heavy chain variable region cDNA.
Anti-idiotype; monoclonal antibody; MAb; 3H1; CEA; carcinoembryonic antigen; cancer; gene therapy; im vaccine; genetic immunisation; heavy chain; VH; ss
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Immunosuppressant polypeptide - has ability to block interleukin-2 response Claim 18; Page 29; 37pp; English.

MAB capable of binding to the gamma chain of the IL-2 receptor, and thus of blocking the IL-2 response, is produced by mouse hybridoma thus of blocking the IL-2 response, is produced by mouse hybridoma Line GP-4 (FERM BP-4640). DNA encoding the variable region of this MAB was expressed in E. coli, yielding Fv(GP-4) with

CC (Ac DNA clone (T31541) codes for the heavy chain variable region (CYM) (R98411) of 3H1, a murine monoclonal anti-idiotype antibody that mimics a specific epitope of the 180,000 mol.wt.

CC carcinoembryonic antigen (CEA) and which elicits an immune response in patients with advanced CEA-associated disease, e.g. colorectal concer. It was obtd. by PCR amplification of 3H1 hybridoma DNA (see also T31545-46). The isolated polynucleotide, and/or a polynucleotide (see also T31540) coding for the VL region (R98410) cof 3H1 can be used to design probes and primers, in expression systems, and in pharmaceutical applns, including vaccines, gene therapy and genetic immunisation, partic. against cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This con the heavy chain of the heavy chain of this control of the heavy chain of the heavy chain of the region (VH) (see W26729) of murine monoclonal anti-idiotype antibody 3H1. A cDNA sequence (see T99434) for the VL region (see W26728) is also provided. These clones can be utilised in the recombinant production of 3H1 polypeptides. 3H1 induces a specific carcinoembryonic antigen (CEA), a tumour-associated antigen. The carcinoembryonic antigen (CEA), a tumour-associated antigen. The invention provides methods of delaying development of CEA-associated tumours using 3H1, particularly in high-risk individuals. The method can be used to delay the development of a variety of tumours, including colorectal, gastric and pancreatic tumours, as well as other adenocarcinomas such as those of the breast and lung, and biliary cancer, and gynaecological cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

A cDNA clone (T34542) codes for the heavy chain variable region (R99687) of monoclonal anti-idiotype antibody 3H1 (ATCC HB 1200 It was obtd. by PCR amplification (see also T34543-44) of cDNA derived from 3H1 hybridoma cells. Anti-idiotype antibody 3H1 elicits a specific immune response to a unique epitope of carcinoembryonic antigen (CEA) that is not present on other members of the CEA family or on normal adult tissues. 3H1 can be used as a vaccine to elicit immune responses in patients
                                                                                                                           Treating B cell lymphoma with chimeric antibody causing rapid depletion of peripheral B cells, a antibodies and hybridomas Disclosure; Fig 4; 101pp; English.

The sequence is the murine variable region light

The sequence shows a vector contg. TCAEB, a gene encoding a chimeric anti-CD20 antibody for treatment of B cell lymphomas. TCAEB contains 4 transcriptional cassettes, human Ig light and heavy chain constant regions, dihydrofolate reductase, neomycin phosphotransferase and murine variable regions. The vector can be used to produce antibodies which cause depletion of peripheral blood B cells, including those associated with lymphoma. They mediate complement-dependent lysis and lyse target cells by antibody-dependent cellular

This CDNA sequence encodes a mouse-human chimeric antibody
light chain (W24532) in which the variable region is derived
from mouse anti-human factor IX monoclonal antibody BC2 cDNA (See
T79899) and human sequences from the immunoglobulin RF-TS3'CL
framework. It was obtained by PCR amplification (See T79897-98)
of BC2 cDNA and insertion of the PCR product into F9HZHC 1-3 cDN4
(See T77374). Claimed anti-Factor IX chimeric antibodies are
useful in the treatment of thrombosis.

This CDNA sequence encodes the light chain variable region (see W24520) of mouse anti-human Factor IX monoclonal antibody RC2. Claimed humanised antibodies (see W24510-18) contain CDRs (see CW2504-09) of BC2 heavy and light chains inserted into framework regions of selected human antibody sequences. They have self-limiting neutralising activity, and are useful as anticoagulant agents in treatment of thrombosis associated with myocardial infarction, unstable angina, atrial fibrillation, stroke, renal damage, pulmonary embolism, deep vein thrombosis, percutaneous transluminal coronary angioplasty, disseminated intravascular coagulation, sepsis, or artificial organs, shunts or prostheses (claimed). Also claimed are chimeric antibodies (see T79900), and Fab and F(ab')2 fragments. The claimed antibodies do not cause uncontrolled bleeding (contrast heparin and warfarin) since they sequence 321 BP; 78 A; 92 C; 79 G; 72 T;

Statistics:

Mean 10.709;

Variance 1.855; scale 5.772

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
